Resistor for FlexTac and Multipoint Charging Applicator

An optional high voltage connector with an 80 Meg resistor is now available for use with the FlexTac and the Multipoint Charging Applicator. The device can be connected between the Chargemaster and the FlexTac or Multipoint, which will make the applicators resistive limited. (The connector barrel is threaded at both ends to accept SLCC connectors.) The connector comes standard with one foot (1') of 50kV high voltage cable and a 30kV SLCC connector. Following are the details:

Part number	4009686
List price	\$220
Additional HV cable (4810226)	\$7 per foot
Additional silicone sleeving	\$3.60 per foot
Resistor value	80 Meg
SLCC Connector	30kV

A 50kV connector can be substituted for the standard 30kV connector at no charge. Use part number 4009686C and specify a 50kV connector on the order form.
